Façades

Give your home a distinctive look with the unique louvers of Sunshield. The wide range of aluminum and wooden louvers allows you to create the style and look you want. Also triangles, trapezoids, arches and even circles are possible. The system will be engineered and customized to your situation. For bedrooms the systems can provide sufficient blackout (light exclusion), making curtains unnecessary. The louvers are very effective as intrusion prevention and can provide privacy where needed, such as bedrooms and bathrooms. The slim line of various louvers preserve for 90% great views to the outside.

Louver Roofs

Sunshield louvers are particularly suitable for a pergola, porch roof or louver roof. Some louvers are simply used for sun protection. Other louvers have integrated the drainage functionality. This can be in a horizontal position (with the usual fall of 1 cm per meter), or as roof tile construction at an angle of at least 5 degrees. A rain sensor can ensure that the louvers close automatically at the first rain drops. The under construction, such as pillars, consoles, and portals, can be made from wood, aluminum, steel, or any other material of your choice. The louvers can be visible from the side or be built into a box around. Special shapes are also possible for louver roofs; useful for example for corners around a fireplace. With the louvers in open position, you keep the maximum amount of natural daylight into your home; more than with any other louver roof.

Rooflights & Glass Roofs

Sunshield has a long history with exterior louvers for glass roofs. The most famous museums have chosen Sunshield to protect their works of art and better control the indoor climate. A conservatory, atrium or glass roof with clear glazing in combination with Sunshield louvers is the best guarantee for optimal natural light conditions in all weather conditions. An additional benefit is that each Sunshield system is virtually maintenance-free.

Skylights Interior

Of course, the “outside” louvers can also be applied indoors, especially if an industrial look is desired. For this, Sunshield can also provide smaller and slimmer louvers (48E, 50A and 50W), specially developed for interior application. The power of Sunshield is its ability to deal with large or high glass windows, special shapes, and glass roofs and skylights. The systems will function reliably, even after many years of use. Don’t let yourself be limited in your desire for as much natural light as possible, because the Sunshield systems prevent direct sunlight and heat gain from becoming bothersome.
A shield against bothersome sunlight

An aesthetic enrichment to the building

100% natural wood possible

All RAL colors possible

Customization

Suitable for odd shapes

High quality extruded aluminium

Suitable for all shapes

Every size and shape possible

Every desired color and appearance

The operation and control you desire

Maximum Guarantee

SUNSHIELD is a leading manufacturer of unique louver systems. The system originates from England and for many years known as the most effective sun control in the market. It was developed from a design company in the Netherlands. Furthermore, in this location Sunshield has invested significantly in design, development and production equipment to extend the applications, possibilities and quality of the louver system.

Thanks to our extensive dealer network we are able to offer our products and services worldwide. Driven by passion our team strives for perfection. Do not hesitate to challenge us with the most complex situations or with requests that at first glance seem impossible.

Every size and shape possible

The development, design and production is all undertaken at one location in the Netherlands. The large waterfront locations not only can produce exceptional louvers such as triangles, trapezoids and every geometric shape, but can also produce wood sections to fit any window in the Netherlands, or the rest of the world. Because Sunshield works along with the most professional powder coating and anodising companies. Therefore a near unlimited and very modern range of colours and finishes is available. With appearance we mean the various gloss levels, structures and finishes available in the market.

Every desired color and appearance

Maximum Guarantee

Each Sunshield system comes with full warranty of 2 years. With annual cleaning and regular maintenance this warranty can even be extended up to 15 years. We also guarantee that replacement parts are available up to a minimum of 15 years after the purchase date.

The operation and control you desire

The louver systems can be operated manually or electrically. For little additional costs the motors can be operated with a remote control. Through the addition of various sensors, the systems can also function automatically, which may be desirable in certain situations. Connection to a home automation system is also possible. The supply of electricity to the system may be an expensive affair. Not necessary. Choose instead for a version with a solar cell and battery. Sunshield works closely together with all known motor suppliers such as Simu, Belimo, Somfy, Elero, Geiger, Becker and Nice. The movable Sunshield louvers have the great advantage that you are able to adjust the light and heat gain to the sun as you wish in the weather conditions outside.
